This proposal covers a complete ordering website for Noir, built to match your brand. It lets customers order chocolate, chocodonuts, cakes, coffee, and gifts online, and gives you a simple dashboard to manage everything yourself, from any phone.

What You're Getting

- A complete ordering website in your brand colors, with your real menu already loaded (Chocodonuts, Chocolate Boxes, Coffee, Desserts, and Sandwiches)
- A fast, single-page ordering experience: customers browse by category, add items with one tap, and check out from a bag that follows them as they shop
- Customers can schedule an order ahead, add a message for a cake, or send it as a gift to someone else with a note
- Mark any item sold out with one tap, so the menu always reflects what's actually available
- A dashboard that shows your revenue, best sellers, and every order in one place, with simple status tracking from new to completed
- Add products, update prices, and upload your own photos directly, no code needed
- Built to work cleanly on phones, both for you behind the counter and for your customers

Investment

Website Build (one-time)	\$450
50% to begin	\$225
50% at launch	\$225

Flexible installment plans are available on request.

Hosting & Support

\$100 per year, billed annually starting at launch. This covers the actual hosting and domain costs, passed on to you directly. I don't take a margin or profit on this fee.

- Hosting, backups, and keeping the site live
- You manage your own products, prices, and photos, with no extra fee for that
- Small tweaks along the way (a wording fix, a quick setting change)

New features or a redesign are quoted separately, only if and when you want them.

Timeline & Ownership

What you've seen so far is the design and direction. From here, development continues: building out the full functionality, connecting it to hosting, and preparing it for launch. I'll confirm a target launch date once that work is underway.

Once live, you own the website, its content, and your data outright. The ongoing fee simply keeps it hosted.

A Note on Payments

The site is built around cash, the same way you take orders today. If you'd later like to accept Whish Money directly on the site, that can be added, but it isn't part of this build. It would need Whish's own approval, and we'd scope it together once you're ready.

Why Not Just Use Shopify?

Shopify is a legitimate option and can run a basic store. For Noir specifically, though, it works out more expensive over time and fits less naturally with how you actually take orders.

	Custom Noir Site	Shopify (approx.)
Year 1 cost	\$550	~\$950 – \$1,150
Every year after	\$100	~\$800 – \$1,000+
3-year total	~\$750	~\$2,500 – \$3,000+
Payments	Cash on delivery or pickup, already how you sell, with no added fees	Free for cash on delivery too, but online or Whish payments later would need a 3rd-party gateway plus a fee per sale, since Shopify Payments isn't available in Lebanon
Cake message, gifting, scheduling	Built in, exactly as you need it	Needs paid apps or custom development to replicate
Your brand, exactly	Matches your real logo and colors from day one	Needs a paid theme plus rework to match your identity
Ownership	Yours outright. Nothing disappears, even if you stop paying	Rented. If you stop paying the subscription, the store goes offline

Figures are estimates: Shopify's published Basic-plan pricing, plus typical costs for a premium theme and the extra apps needed to replicate cake messages, gift orders, and scheduling. Actual costs vary by the apps you choose. Confirm current Shopify pricing directly with them.

Shopify makes more sense for a business scaling fast across many products or locations, with no ongoing developer relationship. For a business Noir's size, with a cash-based model, the custom build costs less over time, fits exactly how you operate, and you own it outright.

Agreement

By confirming this proposal, whether in writing or by reply, both parties agree to the scope, pricing, and terms described above.
